

## Laguna Albums - Print and Bind instructions

Layouts are made from 2-page spreads at 200DPI.

For example: a 10x10 album is made from 20x10 inch spreads 4000x2000 pixels.

We print in the sRGB color space.

Do not over sharpen your images. The Durst Lambda printer does a fantastic job of sharpening the files so we suggest that you do a minimum of sharpening on your own.

Numbering:

We use a 2-digit numbering system 01.jpg, 02.jpg, 03.jpg etc...

Upload Instructions:

Place your numbered files in a folder with the following naming scheme: Studio name in one word, client's name, album size. Separate these by underscores to look like this: "SmithStudio\_Jones\_10x10"

Go to: <http://www.lagunaalbums.com/orders> and set up a new account or log into your existing account. New accounts can take up to 24 hours to be approved. FTP instructions will be given at the time your order is placed. You can reuse this FTP location of all future orders too.

Feel free to contact us [info@lagunaalbums.com](mailto:info@lagunaalbums.com) or call with any questions.
